

# PP405 Video Script

---

**Format:** Instagram / TikTok / Facebook | **Length:** ~3 minutes  
(~450-480 words spoken)

**Tone:** Balanced & journalistic | **Audience:** General public — hair loss sufferers

**CTA:** "Comment HAIR BOMB to Get Started" | **Presenter:** Brand presenter, direct-to-camera

## PRODUCTION NOTES

---

- **Hook must land in the first 3 seconds** — no intros, no logo, straight into the provocative question
- Cut between presenter close-ups and B-roll: lab footage, hair follicle animations, scalp close-ups, clinical trial imagery
- Use on-screen text callouts for all numbers and key terms
- Pacing: fast but not rushed — let key facts breathe for 1-2 seconds

## SCRIPT

---

**[HOOK — 0:00-0:12]**

[Presenter straight to camera. No intro. Urgent but measured.]

**"Scientists just announced a treatment that grew hair in bald spots — spots where there was literally nothing. No hair. Completely bare scalp. And it worked in 8 weeks."**

**So... is this the real thing? Or are we about to get our hopes crushed again?"**

ON SCREEN TEXT: "PP405 — The Hair Loss Breakthrough Everyone Is Talking About"

**[CONTEXT SETTER — 0:13-0:35]**

**"The treatment is called PP405. It was developed by a company called Pelage Pharmaceuticals, spun out of UCLA. And what makes it different from everything else you've tried — Minoxidil, Finasteride, the serums, the shampoos — is HOW it works."**

ON SCREEN TEXT: "Developed at UCLA | Pelage Pharmaceuticals"

**"Most hair loss treatments try to slow down the loss. PP405 does something else entirely. It tries to wake the follicle back up."**

**[MECHANISM — 0:36-1:10]**

[Shift to B-roll of hair follicle animation or microscopy imagery]

**"Here's the science — simplified. Your hair follicles go through cycles: growth, rest, shed, regrow. But in androgenetic alopecia — pattern hair loss — follicles slowly stop cycling. They go dormant. They fall asleep."**

**"PP405 targets something called the Mitochondrial Pyruvate Carrier — or MPC — inside your hair follicle stem cells. These stem cells are still there. They haven't died. They've just... stopped."**

ON SCREEN TEXT: "Follicle stem cells = still alive. Just dormant."

**"PP405 blocks MPC. That blockage causes a build-up of a molecule called pyruvate. That triggers a metabolic shift — your cells switch to a process called glycolysis — basically, they generate more fuel. And that extra fuel is what kickstarts the stem cells back into action."**

ON SCREEN TEXT: "MPC Inhibitor → More Cellular Energy → Stem Cells Reactivate"

**"In plain English: it doesn't just feed your hair. It reboots the factory."**

**[THE STUDY — 1:11-1:55]**

**"Now let's talk about the study — because this is where I want to give you the real picture."**

**"Pelage ran a Phase 2a clinical trial. 78 men and women with androgenetic alopecia. Randomised, double-blind, placebo-controlled — that's the gold standard structure. Half got PP405 gel, applied once a day for 4 weeks. Half got a placebo. Then they were monitored for 12 weeks total."**

ON SCREEN TEXT: "78 participants | Randomised | Double-Blind | Placebo-Controlled"

**"The headline result: 31% of men with more advanced hair loss saw greater than a 20% increase in hair density at week 8. Compared to zero percent in the placebo group."**

ON SCREEN TEXT: "31% vs 0% — Hair Density Increase >20% at Week 8"

**"And here's the part that genuinely surprised researchers: PP405 grew new hairs in follicles that were completely bare. That's regeneration — not just preservation."**

ON SCREEN TEXT: "New Hair in Previously Bare Follicles — True Regeneration"

**"Oh — and no systemic side effects. No absorption into the bloodstream. Clean safety profile."**

**[HONEST VERDICT — 1:56-2:35]**

**"So. Is this the cure? Let me be straight with you."**

**"78 people is a small sample size. The 31% figure comes from a subgroup — men with more advanced loss — not every participant. The treatment was only applied for 4 weeks. And we haven't seen the full peer-reviewed paper yet."**

ON SCREEN TEXT: "Small sample | Subgroup result | Short dosing period | Phase 2a only"

**"This is Phase 2 of what is typically a 3-to-4 phase process. Phase 3 trials are planned for 2026. If everything goes well, we're realistically looking at 2027 to 2029 before this reaches a pharmacy shelf."**

ON SCREEN TEXT: "Phase 3 planned 2026 | Potential approval: 2027-2029"

**"BUT — and this is a big but — the mechanism is genuinely novel. The safety is clean. The trial design is**

**solid. And regrowing hair in a bald spot? That hasn't been done by a topical treatment before. Not like this."**

**"This isn't wishful thinking. This is early, promising, legitimate science. And it's worth watching very closely."**

**[BRIDGE TO ULURX HAIR BOMB — 2:36-3:05]**

[Presenter back to direct camera. Energy up slightly. Product shot of UluRx Hair Bomb serum on screen.]

**"If you're dealing with hair loss right now and you don't want to wait 3 years for PP405 — here's what's available today."**

**"UluRx Hair Bomb is a prescription hair growth serum formulated around Latanoprost — a clinically proven ingredient — combined with up to three other targeted medications like Minoxidil. It's custom-compounded fresh for your scalp by board-certified dermatologists in a licensed U.S. pharmacy. No fillers. No off-the-shelf guesswork."**

ON SCREEN TEXT: "UluRx Hair Bomb | Prescription-Grade | Custom Compounded"

**"PP405 may be the future of hair regrowth. Hair Bomb is what's working right now."**

**[CTA — 3:05-3:15]**

[Presenter, direct eye contact, close-up.]

**"Comment HAIR BOMB below and we'll show you exactly what's in it and whether it's right for you."**

ON SCREEN TEXT: "💬 Comment HAIR BOMB to Get Started"

**"And follow — because when PP405 hits Phase 3, you'll want to know."**

[END CARD: UluRx logo + "💬 Comment HAIR BOMB"]

## WORD COUNT & TIMING

| Section                  | Words       | Est. Time    |
|--------------------------|-------------|--------------|
| Hook                     | 52          | ~12s         |
| Context                  | 55          | ~15s         |
| Mechanism                | 115         | ~35s         |
| The Study                | 130         | ~40s         |
| Honest Verdict           | 125         | ~38s         |
| Bridge — UluRx Hair Bomb | 90          | ~28s         |
| CTA                      | 30          | ~10s         |
| <b>Total</b>             | <b>~597</b> | <b>~3:10</b> |

## CAPTION COPY (Instagram / Facebook)

Scientists just grew hair in bald spots using a topical gel. No injections. No surgery. Just a once-daily application.

The treatment is called PP405 — and the results from its Phase 2 trial are turning heads in dermatology circles.

Is it the breakthrough we've been waiting for? We broke down the science and the study honestly — watch to find out.

PP405 is real. It's promising. And it's years away.

💬 Comment **HAIR BOMB** and we'll show you what's working right now while the science catches up.
